

Bridgeway Path Corridor Study

Project Number: 2627

PROJECT COMPLETED FEBRUARY, 2011

LEAD AGENCY

City of Sausalito

LOCATION

Sausalito, between Sausalito Ferry Terminal and Gate 6 Road

COST

\$100,000

FUNDING SOURCES

\$100,000 NTPP

COMPLETION DATE

February, 2011

PROJECT DESCRIPTION

This project studied the feasibility of connecting the existing Mill Valley-Sausalito Path at Gate Six Road/Bridgeway to the Sausalito Ferry Terminal via an off-street Class I multiuse pathway. The study analyzed various alternatives for making this critical connection in the North-South Bikeway (Route 5) as an alternative to the existing bike lanes on Bridgeway as well as improving facilities for pedestrians. The study followed on the update of the Sausalito Bicycle Plan update in 2008 and the ongoing Imagine Sausalito process, both of which have identified an off-street multiuse facility as a priority for the north-south corridor through the city. The study can be viewed at: http://walkbikemarin.org/documents/Studies/Sausalito_Bridgeway_Study_Final.pdf.

STATUS

The study was completed and accepted by the City Council in February, 2011. Construction of the proposed improvements is dependent on securing additional funding.

Revised January, 2012

Bicyclists Use the Existing Bridgeway Bike Lanes

Old Rail Tracks Adjacent to Bridgeway

Substantial vehicle traffic and freeway ramps make for challenging conditions for cyclists and pedestrians.
